This is the 5' sequence of the clone insert
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DRZ); Email s.wiemannedkfz- heidelberg.de;
sequenced by GBF (National Research Centre for Biotechnology Ltd.,
Braunschweig/Germany) within the cDNA sequencing consortium of the
German Genome Project.
No sl. sequence available.
This clone (DRZD686E07266) is available at the RZPD in Berlin.

// Plasmid DNA from the normalized library NOT CGAP Kid5 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (clonelDs 1325312-1325831, 1471368-1472903 and 1422104-1493225). Subtraction by Bento Soares and M. Fatima Bonaldo.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present sequence is the protein sequence of human carboxylesterase-2 (CDE-2), a novel carboxylesterase family member. CDB-2 participates in the metabolism of various lipid and fatty acid compounds which are involved in pain and/or inflammation signalling. It is highly expressed in tissues which contain afferent neurons, particularly brain and spinal cord tissues which contain afferent neurons, particularly brain and spinal cord tissues which contain afferent neurons, particularly brain and spinal cord tissues which contains achieved and motified a number of characteristic domains and motifis in the COE-2 amino acid sequence. The invention provides COE-2 nucleic acid molecules, antisense nucleic acid molecules, recombinant expression vectors, host cells, ransgenic animals, isolated COE-2 proteins, tusion proteins, antisense peptides and anti-COE-2 pattibodies. COE-2 binding substances are used in an inflammatory or pain disorder. Compounds capable of treating an inflammatory or pain disorder. Compounds capable of treating an inflammatory or pain disorder. Compounds capable of treating an include hyperalgesia, pain associated with musculoskeletal disorders and allergic reaction, asthma, associated with musculoskeletal disorders and include hyperalgesia, pain associated with musculoskeletal disorders and alsorder. Carboxylesterase-associated inflammatory disease, inflammatory disorders, peritonitis, short inflammatory disease, lung inflammatory astrakits, scleroderma, psoriats, inflammatory disease, inflammatory chronitis, septic offermation, polymyosociates, chronitis, chord inflammatory boxel disorders include viral inflammatory disease, inflammatory because there's syndrome, psoriatis, pellaroderma, psoriates, polymosociates, chronitis, cancer, aberrant blood clotting, misreonlation of various reproductive versat blood clotting, misreonlation of various reproductive versat plotting, misreonlatical disorders aberrant blood clotting.

The invention relates to an isolated human drug metabolising enzyme (DME)

colypeptide or a biologically active or immunogenic fragment of DME. DME

catcoimmune/inflammatory, developmental, endocrine, eye, metabolic and

catcoimmune/inflammatory, developmental, endocrine, eye, metabolic and

catcoimmune/inflammatory discress including live disorders. Autoimmune/

conflammatory discress including live disorders. Autoimmune/

conflammatory discress syndrome, Addison's disease, atherosclerosis,

adult respiratory distress syndrome, Addison's disease, autoimmune

conflits, Crohn's disease, atopic dermatitis, diabetes mellitus,

conflitis, Crohn's disease, atopic dermatitis, diabetes mellitus,

conflitis, uveitis, viral, bacterial, protozoal, parasitic,

tungal, helminnic infections and trauma. Cell proliferative disorders

conflude cancer, arteriosclerosis, cirrhosis and psoriasis; developmental

disorders of hypothatemus/pituitary, disorders associated with

chypopituitarism, including diabetes insipidus, hypogonadism, disorders

conflucted with hypothyroidism including goitre, Grave's disease,

confluencials, disorders associated with gonadal steroid hormones such as

confluencials, disorders associated with gonadal steroid hormones such as

confluencials, disorders associated with gonadal steroid hormones such as

confluencials, disorders associated with gonadal steroid hormones such as

confluencials of the eye include conjunctivitis and macular degeneration and

metabolic disorders include diabetes, cystic fibrosis, obesity and

metabolic disorders include diabetes, cystic fibrosis, obesity and

confluency hepatitis, constipation, diarrhoes, jaundice, Wilson's disease,

thrombosis and hepatic tumours. DME gene is useful in gene therapy. The

constipation diarrhoes, and purchen is useful in gene therapy. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             22-APR-1
                                                                                                                                                      Homo
 The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chomosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed censes. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in issue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and canno acid sequences. ABG00010-ABG30377 respected to DNA and canno acid sequences. ABG00010-ABG30377 respected to DNA and canno acid sequences. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AAZ13891 to AAZ34138, and AAY41685 to AAX41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                엄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of detect the presence of a tumour in a mammal by comparing the level of detect the presence of a tumour in a mammal by comparing the level of and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also proteins can be used to determine the presence of tumours and also breast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumors, such as prostate and breast tumors, in mammals and to screen for modulators of the compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           106
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   145

Padennec 2, Application US/09140933

Patent No. 602219

GENERAL INFORMATION:
APPLICANT: Hubbs, John C.
TITLE OF INVENTION: Enzymatic Process for the Manufacture of
TITLE OF INVENTION: Ascorbic Acid, 2-Keto-L-Gulonic Acid, and Esters of TITLE OF INVENTION: 2-Keto-L-Gulonic Acid
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: Eastman Chemical Company
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      299 KSEDELLDLTLKMKFLTLDFHGDQRESHPFLPTVVDGVLLPKMPESILAEKDFTFNTVPY

Patent No. 6001625
GENERAL INFORMATION:
APPLICANT: Broomfield, Clarence A
APPLICANT: Milard, Charles B
APPLICANT: Lockridge, Oksana
TITLE OF INVENTION: Site-Directed Mutagenesis of Esterases
NUMBER OF SEQUENCES: 31
CORRESPONDENCE ADDRESS:
ADDRESSEE: Hendricks and Assoc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CONDUTER READABLE FORM:

MEDIUN TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: DC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/446,100
FILING DATE: 19-MAY-1995
ATTONEY/AGENT INPOMATION:
NAME: Hendricks, Glenna
REGISTRATION NUMBER: 32,535
REFERENCE/POCKET NUMBER: 32,535
REFERENCE/POCKET NUMBER: 32,535
REFERENCE/POCKET NUMBER: 32,535
REFERENCE/POCKET NUMBER: 32,535
RELEPANCE (703) 425-2567
INFORMATION FOR SEQ ID NO: 27:
